

# Leading Hotel & Restaurant Chain Sets up Authorable eLearning Microsite on AEM

## The Challenge

The client wanted to build an eLearning microsite using AEM, which would allow them to manage content with minimal developer support. Additionally, they wanted custom components for various content types like articles and videos. The biggest challenge was to create these components within a month.

## The Solution

- Trantor developed custom component for publishing latest articles. The component had responsive interface and was authorable for header tag, number of articles and more button text.
- Developed custom YouTube component, where author could input video URL and the frame ratio.
- Developed custom workflow process component where multiple authors could review the content, one at a time. After successful review the content got published automatically.

## The Benefit

- Project completed in 2 weeks
- Successful integration of the elearning site based on Alfresco with CQ
- Writing services for integration of CQ with Alfresco hosted learning content
- Consistent look and feel of the components with the rest of the site
- Robust content rights management for complete microsite

## The Client

Client is a multinational hotel, coffee shop and restaurant company headquartered in Dunstable, United Kingdom.
